Not illustrated. 1873 Excerpt: .but an equal distribution over the area must always remain the first consideration. Standard trees with very large and low branches may be pruned with advantage. If it is found that the natural reproduction by seed is not sufficient to supply standard trees for the next rotation, the species chosen for standard trees must be artificially cultivated by means of transplants. CHAPTER III. Treatment Of Forests And Single Trees. Definition. Definition. We promote and guide the growth of forests and single trees by means of stopping, thinning and pruning. This is called Treatment of Forests. Promotion of the growth of young forests by establishing a close growth, otherwise called stopping. Promotion of I mentioned in the preceding: chapter that a the growth of. x i youiiK forests by reproduced forest must be made to close overhead close growth, as rapidly as possible, the branches must touch...
